## ANTI-SLIP COATING

### DESIGN CONSIDERATIONS

- Anti-Slip was formulated to provide a superior slip-resistant surface for TSM's line of grab bars. Until Anti-Slip was developed, peening and knurling were the industry standards. However, peening, a texture achieved by hitting the bar with shot pellets at high speed, actually adds very little slip-resistant property to a bar. Knurling, on the other hand, cuts a diamond-shaped crosshatch into the surface of the bar which provides excellent slip resistance, but can become more of a hazard than a help if soap residue is not cleaned out of the grooves.
- Anti-Slip has subsequently proven more versatile than originally imagined. Tubs, showers and even doorknobs (to provide a tactile surface for the sight impaired) have all proved to be excellent applications for Anti-Slip.
- Anti-Slip is cleaned easily.
- To receive a free sample, please contact the factory.

### OPERATION

TSM Anti-Slip is a safety coating which can be applied to slick surfaces to create a slip-resistant finish, but without abrasiveness to skin. It was created for indoor use for barefoot and soft shoe traffic only and, although it dries clear, it slightly alters the appearance of the substrate.

Anti-Slip is recommended for grab bars, bathtub and shower floors, locker room areas—almost any area where moisture can combine with smooth surfaces to create slippery situations. When the viscous Anti-Slip liquid is mixed with an adhesion promoter (supplied in premeasured amount), it can be brushed, sprayed or rolled on.

### SUGGESTED ARCHITECTURAL SPECIFICATION

TSM model 20100 Anti-Slip Coating from Tubular Specialties Manufacturing, Inc., Los Angeles, California, (213) 515-4801. Characteristics: clear silicone grit suspended in a resin-based emulsion; dries clear and provides a slip-resistant surface.
